ABSTRACT-- **The topic that i have selected is called "Crypto-Tracker" which we have developed using CSS,HTML, JavaScript, react js , material ui and chart js with full responsive functionality Context API to manage the state and coin gecko api for backend . Crypto Tracker's goal is to give users power over the cryptocurrencies they're interested in by providing price, news, and exchange rate updates.The inspiration for the project came from seeing the current surge in everything linked to cryptocurrencies which has resulted in a significant growth in the number of cryptocurrency-related apps in the Android market. The majority of these apps work by displaying worldwide information about the various cryptocurrencies available on the market,which is then supplemented based on the user's tastes and choices. As a result, an application has been created that organizes the rest of the information offered by the programme based on the cryptocurrencies that the user chooses to follow. CoinTracker is designed with simplicity in mind, without any knowledge about Cryptocurrency Exchanges or complex crypto related vocabulary you can start using the app and track your coins.One of CoinTrackers strongest features has always been its simplicity and ease of use. It was designed from the start so that even novices could use it.**

Keywords: Cryptocurrency, Bitcoin, Encrypted,Currency, Bitpay, Exchange Rates, Principal

Components Analysis, Blockchain.

I. INTRODUCTION

Cryptocurrency tracker allows you to track the total amount and value of your cryptocurrencies across all wallets, exchanges, platforms, and blockchains in real-time.These apps let you track historic transactions, their worth, and destinations or sources.
